## Unit Price Problem

A pavement replacement project has the pay items and engineer's estimate of quantities shown in Table 1. The contractor's costs for his cost items are given in Table 2. A network for the work is shown below.

1. Calculate the unit prices of the pay items for the construction contract. Assume that the cost items, which are not pay items, will have their cost allocated to the pay items with which they are associated. Overhead and profit, however, will be allocated evenly over all dollars of direct cost.
2. Determine the effect on gross income, particularly on fixed cost recovery, if the new pavement width increases by $10 \%$. This affects base, topping and duration (no changes in unit prices during construction, after contract is signed)

Table 1:

|  | Pay Items | Quantity |
| :--- | :---: | :---: |
| Detour | 1 | Unit |
| Remove Pavement | 24,000 | LS |
| Install Base | 8,000 | SY |
| Barricades | 5,000 | CY |
| Topping | 36,000 | LF |
| Signs | 1 | SY |
| Lights | 1 | LS |
| Culverts | 3 | LS |
| Landscape | 150,000 | EA |

## Table 2:

| Cost Item | Quantity | Unit | Unit Cost = \$/Unit |  |  |  | Duration (work days) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Material | Equip. | Labor | Sub |  |
| Detour | 1 | EA | \$14,000 | \$24,000 | \$16,000 |  | 15 Install |
|  |  |  |  |  |  |  | 10 Remove |
| Concrete plant (for topping) | 1 | EA |  | \$60,000 |  |  | 20 Delivery |
| Culverts | 3 | EA |  |  |  | \$40,000 | 10 Each |
| Break pavement | 24,000 | SY |  | \$4.20 | \$3.60 |  |  |
| Remove pavement | 3,300 | CY |  | \$5.60 | \$4.50 |  | 50 |
| Install base | 12,000 | CY | \$14 | \$15 | \$13 |  | 30 |
| Concrete topping | 8,000 | CY | \$60 | \$25 | \$34 |  | 30 |
| Install wiring | 14,000 | LF |  |  |  | \$5.00 | 30 |
| Install lights | 30 | EA |  |  |  | \$3,600 | 20 |
| Install signs | 40 | EA |  |  |  | \$2,400 | 20 |
| Install barricades | 5,000 | LF | \$10 |  | \$15 |  | 30 |
| Landscape | 150,000 | SY | \$0.60 | \$0.90 | \$0.50 |  | 40 |
| Quality control ( $1 / 2$ for base and $1 / 2$ for topping) | 1 | EA |  |  |  | \$40,000 |  |
| Variable overhead (\$/day) |  |  | \$120 | \$250 | \$280 |  |  |
| Fixed overhead | \$250,000 |  |  |  |  |  |  |
| Profit markup | \$150,000 |  |  |  |  |  |  |

Schedule signs and barricades as late as possible (at LSD and LFD).
